

Figure 1 illustrates the study design, showing the flow from the initial population to the final analysis. The study population is divided into two main groups, Group 1 and Group 2, each with 500 participants. Group 1 is further divided into Subgroup 1a and Subgroup 1b, each with 250 participants. Group 2 is divided into Subgroup 2a and Subgroup 2b, each with 250 participants. Each subgroup is then divided into two sub-subgroups, resulting in a total of 10 sub-subgroups, each with 125 participants. The flowchart continues with Sub-subgroup 2a.1, Sub-subgroup 2a.2, Sub-subgroup 2b.1, and Sub-subgroup 2b.2, each with 125 participants. The final step is the Analysis, which includes all 1000 participants.
